Alumni Mentorship & Mock Interview Platform

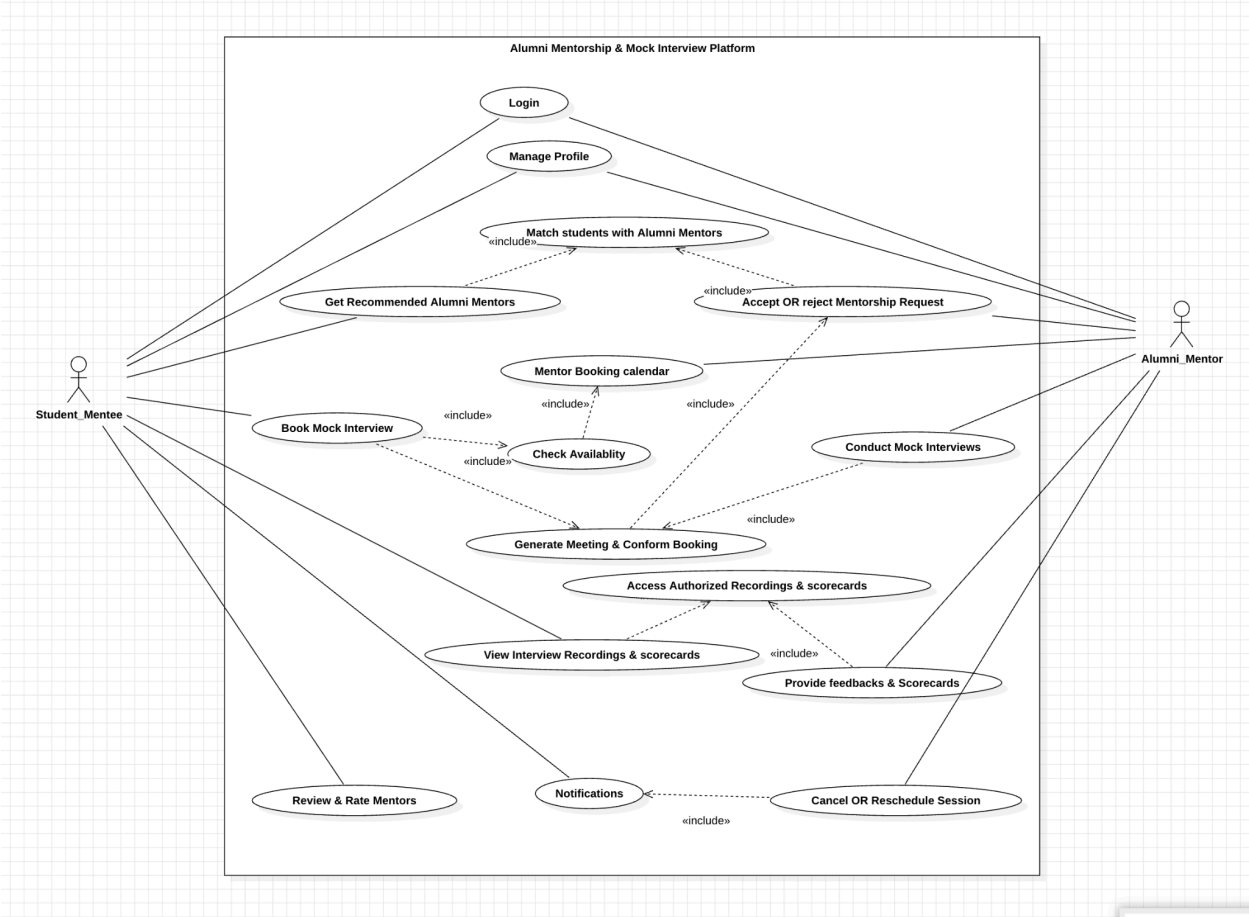

1.FRs/NFRs

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)	Comments
FR-001	Functional	The system shall **recommend suitable alumni mentors** to students based on domain, skills, career interests, experience, and mentorship preferences.	High	System displays ranked mentor recommendations matching the student's selected criteria.	Enables effective mentor–mentee matching.	Matching can initially use rule-based scoring and later support ML-based ranking.
FR-002	Functional	The system shall allow students to **book mock interviews** when a mutually available time slot exists for both mentor and mentee.	High	Booking is successful only when the selected slot is available to both parties.	Provides structured mock interview scheduling.	Double booking must be prevented.
FR-003	Functional	The system shall allow students to **access interview recordings, scores, feedback, and improvement suggestions** for their completed interviews.	High	Student can view/download authorized recordings and evaluation results.	Supports self-evaluation and continuous improvement.	Access should be limited to the concerned student and mentor.

FR-004	Functional	The system shall allow students to **review and rate mentors** based on their mentorship experience.	Medium	Student can submit a rating and review after a completed mentorship/interview interaction.	Helps maintain mentorship quality and transparency.	One review per eligible interaction should be enforced.
FR-005	Functional	The system shall provide **notifications** for mentorship requests, acceptance/rejection, booking confirmation, upcoming interviews, cancellations, and feedback availability.	Medium	Relevant notifications are generated for the corresponding events.	Reduces missed interactions and improves communication.	Notifications may be implemented through in-app and email channels.
NFR-001	Nonfunc.	All **user profile data and** feedback scorecards shall adhere to privacy guidelines and support **soft-deletion within 24 hours of request**.	High	Upon a **valid deletion request**, the user's profile data and feedback scorecards shall be **marked inactive/hidden from normal access within 24 hours**.	Protects user privacy and provides controlled data deletion without immediately compromising auditability or system integrity	Soft-deleted records should be retained only for the defined retention period before permanent deletion.

NFR-002	Nonfunc.	The system shall provide **secure authentication and authorization** for all registered users.	High	Unauthorized users cannot access protected resources or APIs.	Protects user and interview data.	Use secure password hashing/session or token-based authentication.

2.UML Use-Case Diagram

3.Use-Case Flow Document

Use Case Name: Book Mock Interview
Related Requirement: FR-002
Primary Actor: Student (Mentee)
Supporting Actor: Mentor

Main Success Scenario

1. The student logs into the Alumni Mentorship & Mock Interview Platform.
2. The student selects **Book Mock Interview**.
3. The system displays available mentors and their available interview time slots.
4. The student selects a preferred mentor and time slot.
5. The system checks the mentor's availability for the selected slot.
6. The system checks the student's availability for the selected slot.
7. The system confirms that the selected slot is available for both the mentor and the student.
8. The system reserves the slot and prevents it from being booked by another student.
9. The system creates the mock interview booking.
10. The system displays a booking confirmation containing the mentor, date, time, and interview details.
11. The system sends a notification to both the student and mentor.

Alternate Flow – Selected Slot Becomes Unavailable

A1. Slot unavailable during booking

1. At Step 7, the system detects that the selected slot is no longer available for the mentor or student.
2. The system does not create the booking.
3. The system informs the student that the selected slot is unavailable.
4. The system displays other available time slots.
5. The student selects another mutually available slot.
6. The system repeats the availability check and proceeds with the booking if the slot is available.

Postconditions

- A valid booking is stored in the system.
- The selected time slot is reserved for the student and mentor.
- Double booking of the same slot is prevented.
- Both participants receive the booking confirmation.
